

RIZIK HADDAD

Clemmons, NC | (336) 816-6689 | rizig.haddad.rh@gmail.com | linkedin.com/in/rizik-haddad | github.com/RizikH

PROFESSIONAL SUMMARY

Full stack developer with a shipped .NET 10 backend (live on Render), a production Node.js/Express API, and JWT auth built across two independent stacks. B.S. Computer Science, 2025. Proficient in Spring Boot, PostgreSQL, React/Next.js, and Flutter. Additional experience integrating LLM APIs (OpenAI, Claude) into production workflows.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, C#, Python, SQL, HTML, CSS

Backend: Spring Boot, Node.js, Express.js, .NET 10 / ASP.NET Core, REST API Design, JWT Authentication, BCrypt, MVC Architecture, OOP

Frontend: React.js, Next.js, TypeScript, Flutter, Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite, JPA/Hibernate, Entity Framework, Supabase

Tools & DevOps: Git, Docker, AWS S3, Vercel, Render, Agile/Scrum, Linux, CI/CD

AI & APIs: OpenAI API (GPT-4/4o), Claude API, Structured Output Parsing

PROJECTS

iHive — Real-Time Collaboration Platform | Lead Full Stack Developer Jan 2025 – Present

Node.js, Express.js, PostgreSQL (Supabase), React, Next.js, OpenAI GPT-4 API, AWS S3, WebSocket

- Architected and deployed the full backend (Node.js/Express, 15+ REST endpoints) to Render, covering PostgreSQL schema design, business logic, and AWS S3 integration for file storage
- Implemented role-based access control (public, protected, private) with least-privilege permission enforcement at the API and database levels
- Integrated OpenAI GPT-4 for automated content tagging via custom system prompts with JSON schema enforcement, structured output parsing, and fallback handling for malformed LLM responses
- Led 4-developer Agile/Scrum team: conducted code reviews, debugged WebSocket reliability issues, and resolved rate-limiting edge cases in the AI integration

AppOps — Developer Productivity Platform | Full Stack Developer Jan 2026 – Present

.NET 10 / C#, PostgreSQL, Entity Framework Core, ASP.NET Core Identity, Clean Architecture, JWT, Flutter

- Architected a 4-layer .NET 10 backend (API, Application, Domain, Infrastructure) with a 5-table PostgreSQL schema; domain entities auto-generate timeline events on status change via encapsulated business logic
- Implemented JWT auth (15-min access / 30-day refresh) with token rotation, explicit revocation, and user isolation enforced at the DbContext level via IHttpContextAccessor — no per-query filters needed
- Hardened auth endpoints with IP-based rate limiting (5 req/min login, 3 req/min register) via AspNetCoreRateLimit; Swagger/OpenAPI configured with Bearer auth; backend live on Render

JustSeen — Movie Tracking Platform | Full Stack Developer Jun 2024 – Present

Spring Boot, React, Next.js, TypeScript, PostgreSQL, JPA/Hibernate, JWT, BCrypt

- Built Spring Boot backend (MVC: Controllers, Services, Repositories, DTOs) with JWT auth, BCrypt encryption, and HTTP-only cookie session management; deployed to Render
- Resolved TMDb API data issues via server-side deduplication and response caching, reducing redundant API calls by ~60% and cutting average page load time

EXPERIENCE

Computer Science Tutor | University of North Carolina at Greensboro Aug 2022 – May 2024

- Tutored students across OOP (Java), x86 Assembly, and C over 3 semesters, guiding debugging strategies, course projects, and exam preparation
- Built technical communication skills explaining low-level memory, pointer, and algorithm concepts to students with varying experience levels

EDUCATION

Bachelor of Science in Computer Science | Minor in Mathematics

University of North Carolina at Greensboro | Graduated 2025 | GPA: 3.4

Relevant Coursework: Software Engineering, Database Systems, Data Structures, Algorithms, Operating Systems
